Data Sheet for Tenpin bowling

The game

A game has ten **frames** for each player.

In each frame, a player starts with ten pins to knock over.

A player bowls a ball one **or** two times in a frame.

If they knock over all ten pins with their first ball, their frame is complete.

This is called a **strike**.

If there are pins still standing, they bowl a second ball at the remaining pins.

If they knock them all over, this is called a **spare**.

Scoring

These examples show how to work out a player's score.

Example 1 – Sophie's first two frames

Frame 1

1st ball → 6 pins 2nd ball → 2 pins

Frame 2

1st ball → 5 pins 2nd ball → 4 pins

Here is the scoreboard after Frame 2

1		2	
6	2	5	4
8		17	
↑		↑	
6 + 2		8 + 5 + 4	

After Frame 1, Sophie's total score is 8

After Frame 2, Sophie's total score is 17

Example 2 – Mike’s first two frames**Frame 1**

1st ball → 3 pins 2nd ball → 7 pins
spare

Frame 2

1st ball → 6 pins 2nd ball → 2 pins

Here is the scoreboard after Frame 1

The symbol for a spare is /

1	
3	/

The total score after the spare cannot be worked out until Mike bowls his next ball.

A spare scores 10 + the number of pins knocked over with the player’s next ball

Here is the scoreboard after Frame 2

1		2	
3	/	6	2
16		24	
↑		↑	
10 + 6		16 + 6 + 2	

After Frame 1, Mike’s total score is 16

After Frame 2, Mike’s total score is 24

Example 3 – Fatima’s first two frames**Frame 1**

1st ball → 10 pins

strike

Here is the scoreboard after Frame 1

The symbol for a strike is **X****Frame 2**

1st ball → 5 pins 2nd ball → 4 pins

1	
X	

The total score after the strike cannot be worked out until Fatima bowls her next **two** balls.A strike scores 10 + the number of pins knocked over with the player’s next **two** balls

Here is the scoreboard after Frame 2

1		2	
X		5	4
19		28	
↑		↑	
10 + 5 + 4		19 + 5 + 4	

After Frame 1, Fatima’s total score is 19

After Frame 2, Fatima’s total score is 28

The scoreboard

Here is the scoreboard for a complete game for Mike.

1		2		3		4		5		6		7		8		9		10	
3	/	6	2	2	/	5	4	X		6	/	4	3	7	2	X		6	3
16		24		39		48		68		82		89		98		117		126	

Mike’s final score is 126

Data Sheet for Electricity

Electrical items use different amounts of electricity.

The electricity used depends on
the power of the item
the amount of time the item is switched on.

Power is measured in kilowatts (kW) or watts (W).

$$1 \text{ kW} = 1000 \text{ W}$$

Using electricity

The number of units of electricity an item uses is worked out using

$$\text{Number of units} = \text{Power in kW} \times \text{Time in hours}$$

Example

A 3000 W electric fire is switched on for $2\frac{1}{2}$ hours.

$$\text{Power} = 3000 \div 1000$$

$$= 3 \text{ kW}$$

$$\text{Time} = 2.5 \text{ hours}$$

$$\text{Number of units} = 3 \times 2.5$$

$$= 7.5$$

The fire uses 7.5 units of electricity.

Cost of electricity used

Work out Number of units of electricity used \times Cost per unit
