Signature: _____

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and answers at each stage.
- Diagram are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**
- Take the value of π to be 3.14

Information

- The total mark for this section is 16.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- This sign shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

- 1 Shannon works in a mobile phone shop.

This week Shannon makes

- 19 pay as you go phone sales
- 57 SIM card with handset contract sales.

The remaining sales were SIM card only contracts.

Shannon made a total of 114 sales during this week.

What fraction of the sales made by Shannon this week were SIM card only contracts?
Write your fraction in its simplest form.

(3)

$$\begin{array}{r} 57 \\ + 19 \\ \hline 76 \\ 1 \end{array}$$

$$\begin{array}{r} 114 \\ - 76 \\ \hline 38 \end{array}$$

$$\frac{38}{114} = \frac{19}{57} = \frac{1}{3}$$

(Total for Question 1 is 3 marks)

2 Grace and James share £72 in the ratio 4:5

- (a) Work out the amount of money that James gets.
You **must** show your working.

(2)

$$4 + 5 = 9$$

$$72 \div 9 = 8$$

$$8 \times 5 = 40$$

£ 40

- (b) Show a check of your working.

(1)

$$40 \div 5 = 8$$

(Total for Question 2 is 3 marks)

- 3 Brian collects loyalty points at the supermarket.
The total value of the loyalty points he has collected is £17.50
Brian has this information.

Exchange loyalty points for
travel vouchers and get
3 times the value

Travel vouchers can be used to pay for ferry tickets.

Brian wants to book 2 ferry tickets.
The ferry tickets cost £33.25 and £29

Brian will exchange all his loyalty points for travel vouchers.
He will use all the travel vouchers towards the cost of the ferry tickets.

Brian will pay for the rest of the cost of the ferry tickets with his bank card.

How much will Brian pay with his bank card?

(4)

$$\begin{array}{r} 3 \\ \times 17.50 \\ \hline 1.50 \\ 21.00 \\ 30.00 \\ \hline 52.50 \end{array}$$

$$\begin{array}{r} 33.25 \\ + 29.00 \\ \hline 62.25 \\ 1 \end{array}$$

$$\begin{array}{r} 5 \text{ } 11 \\ 67.25 \\ - 52.50 \\ \hline 09.75 \end{array}$$

£ 9.75

(Total for Question 3 is 4 marks)

- 4 Zia makes and sells candles.
She wants to make candles in the shape of a triangular prism.

Zia has this sketch of the triangular face and the candle.

Zia will melt wax to make the candles.
She knows that

- each 1 kg of solid wax makes 1.2 litres of melted wax
- 1 litre = 1000 cm^3
- the volume of a prism = area of cross section \times height

Zia has a 5 kg bag of solid wax.
She thinks that she can make at least 20 candles with this bag of solid wax.

Is Zia correct?

Show why you think this.

$$\text{Cross section area} = \frac{1}{2} \times 10 \times 8 = 40 \text{ cm}^2 \quad (6)$$

$$\text{Volume} = 40 \times 6 = 240 \text{ cm}^3 = 0.24 \text{ litres}$$

$$5 \times 1.2 = 6 \text{ litres of wax}$$

$$6 \div 0.24 = 25 \text{ candles}$$

Zia is correct she can make 25 candles

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

- 1 Johan is cooking using an old recipe.
The recipe says to preheat the oven to a temperature of 350 °F.

The oven Johan uses is marked in centigrade (°C).
He finds this formula to change from °F to °C.

$$C = \frac{5(F - 32)}{9}$$

C = temperature °C
 F = temperature °F

Johan sets the oven temperature to 190 °C.

Has Johan set the oven to the correct temperature for this recipe?

(3)

$$C = \frac{5(350 - 32)}{9} = \frac{5 \times 318}{9}$$

$$= 1590 \div 9 = 176.67^{\circ}\text{C}$$

No, Johan has set it too high, it needs
to be at 176.67 °C

6 Kasim wants an extension built onto his house.

The diagram shows part of the house and the centre of a tree.

Key 1 cm on the grid represents⁴..... m on the ground
 X represents centre of tree

The length of the house is 36 m.

(a) Complete the key.

$$36 \div 9 = 4$$

(1)

The extension will be in the shape of a rectangle with width of 10 m and the same length as the house.

The roots of the tree grow in a circular shape.

The roots grow to a maximum length of 20 m from the centre of the tree.

The extension will need deep foundations if built over the roots.

(b) Will the extension need deep foundations?
 Use the grid to show why you think this.

$$20 \div 4 = 5$$

$$10 \div 4 = 2.5$$

(2)

Yes, part of the extension will be over the roots

- 7 Tess works for a drinks company.
She is told that it is better for the environment if less metal is used when making cans.

She starts to design a new can that is taller and narrower than the old can.
The new can

- is in the shape of a cylinder
- has a diameter of 52 mm
- has a height of 154 mm
- holds the same amount of drink.

Tess knows that $27\,332\text{ mm}^2$ of metal is used to make the top, the side and the bottom of each old can.

She thinks that her design will use less metal to make the top, the side and the bottom of each new can.

Is Tess correct?
Show why you think this.

$$\text{Surface area of top/bottom} \\ = 3.14 \times \left(\frac{52}{2}\right)^2 = 2122.64 \text{ mm}^2$$

$$\text{curved surface area} = 3.14 \times 52 \times 154 = 25145.12 \text{ mm}^2$$

$$\text{Total SA} = 2122.64 \times 2 + 25145.12 = 29390.4 \text{ mm}^2$$

Tess is not correct it will use more metal
(29390.4 mm^2)

NO

(Total for Question 7 is 4 marks)

- 8 Last week 263 people passed their driving test at a test centre.

The table shows information about the number of driving tests these people took before passing.

Number of driving tests taken	Frequency
1	118
2	74
3	43
4	21
5 or more	7

- (a) What is the probability that a person chosen at random passed their driving test on the first attempt?

(1)

$$\frac{118}{263}$$

- (b) What is the probability that a person chosen at random did not pass their driving test on the first attempt?

(2)

$$\frac{263 - 118}{263} = \frac{145}{263}$$

$$\frac{145}{263}$$

£ 280.22

(Total for Question 11 is 5 marks)

- 12 Andy works at a medical centre.
He reads a news report about a shortage of doctors in some parts of the UK.

The report states the following figures for the UK

- the average number of patients per doctor is 1734
- the range is 826 patients per doctor.

The table shows some information about the number of patients for each doctor at the medical centre.

Doctor	Number of patients
A	1348
B	1847
C	1760
D	1562
E	1240
F	1703

Andy needs to write a report to compare the figures for the medical centre with the figures for the UK.

He needs to comment on

- a comparison of the average number of patients per doctor
- the consistency of the number of patients per doctor.

Write comments for the report.

Remember to use calculations and figures to support your comments.

$$\begin{aligned} \text{mean number of patients} &= (1348 + 1847 + 1760 + 1562 + 1240 + 1703) \div 6 = 1576.67 \\ &\approx \underline{\underline{1577}} \end{aligned} \quad (6)$$

$$\text{range} = 1847 - 1240 = \underline{\underline{607}}$$

The average number of patients per doctor is lower than the national average and the range is smaller so the results are more consistent.
